

## Week 2

### Applicable VLOs or EEs for This Week's Case Study

1. Collect, manipulate, and mine data sets to meet organisational needs.

### This Week's Detailed Case Study Information

The week you've been eagerly waiting for has finally arrived; your internship at Pattern Drop Analytics is officially starting, and you couldn't be more excited. This company just hits differently. Its founder has created something truly unique, and you're thrilled to be part of such an innovative space.

You're immediately struck by how different it feels when you arrive at your supervisor's office. Neon lights line the walls, the furniture is modern and quirky, and there's even a dedicated gaming corner with a PS5 and a Nintendo Switch. This definitely isn't your average office!

"Hey there! How's it going?" Says a friendly, young-looking guy as he extends his hand. "I'm Conrad Pacey, and I'll be your supervisor."

You can't believe how young he looks! But don't be fooled; as he introduces himself, you learn that he holds a Master's Degree in Data Science and Artificial Intelligence, and he's been with Pattern Drop Analytics since the early days.

After a few minutes of chatting, getting to know your fellow interns, and sharing a bit about your own background, Conrad dims the lights and turns on the projector to kick off your very first project.

"Alright, team! For your first assignment, you'll be working with a startup wellness app that focuses on motivation and calm energy," he explains.

"They've reached out to us because they want help selecting the best trending audio clips on TikTok and Reels for their upcoming promotional videos."

Your task? Research trending audio, identify the top 3 clips that align with the brand's soothing, motivational vibe, and explain how each one can be used effectively. It's your job

to make sure the audio choices aren't just trendy; they also fit the client's tone and help elevate their message.

### Deliverables for This Week's Case Study

Your tasks this week include:

- Collect a dataset of 50–100 trending audio clips from TikTok or Instagram Reels.
  - Be sure to include key metadata such as the audio name, number of uses, platform, category (e.g., calming, upbeat, humorous), and a direct link to the audio.
- Design and implement a process to clean and categorize the collected audio data using a tool of your preference.
- Analyze your dataset and select three trending audio clips that align with the startup's brand tone and goals.
- Prepare a brief slide deck that justifies your selections based on data and brand fit.
  - Include links to each audio clip, example content, and suggestions for how the startup could use each one effectively.
